INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/IB 03/04162

111.	l. Non-establishment of opinion with regard to novelty, inventive step and industrial applicability									
1.	. The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), or to be industrially applicable have not been examined in respect of:									
		the entire international applicat								
	\boxtimes	claims Nos. 44-55								
		because:								
	the said international application, or the said claims Nos. 44-55 relate to the following subject matter does not require an international prellminary examination (specify):									
		see separate sheet								
	the description, claims or drawings (indicate particular elements below) or said claims Nos. are so unclease that no meaningful opinion could be formed (specify):									
	the claims, or said claims Nos. are so inadequately supported by the description that no meaningful opini could be formed.									
	no international search report has been established for the said claims Nos.									
2.	A meaningful international preliminary examination cannot be carried out due to the failure of the nucleotide a or amino acid sequence listing to comply with the standard provided for in Annex C of the Administrative Instructions:									
	☐ the written form has not been furnished or does not comply with the Standard.									
		the computer readable form ha	ed or does not comply with the Standard.							
۷.	V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability citations and explanations supporting such statement									
1.	1. Statement

2. Citations and explanations see separate sheet

EXAMINATION REPORT - SEPARATE SHEET

Re Item III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

Claims 44-55 relate to subject-matter considered by this Authority to be covered by the provisions of Rule 67.1(iv) PCT. Consequently, no opinion will be formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(I) PCT).

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following document/s/: 1.

D1: FR-A-2 819 720 (FOURNIER SA LAB) 26 July 2002

D2: WO 02/11699 A (IMPAX LAB INC) 14 February 2002

D3: FR-A-2 795 961 (ETHYPHARM LAB PROD ETHIQUES) 12 January 2001

The subject-matter of independent claims 1 and 44 is not considered novel (Art. 33(2) 2. PCT) in view of prior art disclosures which can be taken from D1 and D2.

D1 (cf. Example 1) and D2 (cf. page 9, lines 1-24; Table 1, Table 7) disclose the association of micronized fenofibrate with an insoluble inert carrier, i.e. microcrystalline cellulose (D1, D2) and pregelatinized starch (D1). In both cases the obtained product is a granulate comprising the inert carrier and the micronized fenofibrate together with a binder (e.g. PVP or HPMC) and a surfactant (e.g. sodium lauryl sulfate). The production process comprises mixing the inert carrier with the micronized fenofibrate in powder form and granulating the mixed powders with a solution comprising the binder and surfactant. Hence, the process of D1 and D2 differs from the process disclosed in the present application, because in the latter the powdered inert carrier is granulated with a solution comprising a binder, surfactant and the micronized fenofibrate. The obtained granulates, however, are very likely to be identical. At least, it is not clear how the final products in D1 and D2 should be distinguished from those of the present application. Accordingly, the granulates of D1 and D2 are considered to fall within the definition of the present claim 1. As a consequence, the method of claim 44 is also not considered novel in view of D1 (cf. page 13, lines 4-6) and D2 (cf. page 3, lines 23-26).

- 3. The subject-matter of independent <u>claim 23</u> is not considered to involve an inventive step (Art. 33(3) PCT) in view of prior art disclosures which can be taken from D1 and D2.
 - D1 (e.g. page 10, example 1) and D2 (e.g. page 9, Table 1; page 13, Table 7) both disclose fenofibrate formulations with enhanced bioavailability, wherein the same surfactants, same hydrophilic polymers and same fillers are used in very similar proportions to those defined in the present claims. The percentages defined in the above mentioned claims do furthermore not appear to solve any problem posed and merely fall within amounts which are common in the art.
- 4. The process according to independent <u>claim 30</u> is not considered to involve an inventive step in view of the teaching in D1, D2 and D3.

The claimed process differs from that of D1 (cf. Example 1) and D2 (cf. page 9, lines 11-22) only in that the micronized fenofibrate is dispersed in the granulating liquid, whereas in D1 and D2 the micronized fenofibrate is provided in powder form mixed with the inert carrier and subsequently wet granulated. No technical effect can be seen on the final product provided by this difference. The present application discloses improved solubility and bioavailability of the fenofibrate (cf. description page 7, lines 14-16). This is however also disclosed in D1 (cf. page 5, lines 28-31) and D2 (cf. page 2, lines 13-22; page 3, lines 19-22). Accordingly, the process of the present application is considered as an alternative to D1 and D2. However, granulation processes, wherein-micronized fenofibrate is dispersed in the granulating liquid, are generally known and disclosed e.g. in D3 (cf. page 4, lines 19-27). Suspending the fenofibrate in the granulating liquid is accordingly considered as an obvious modification from which the skilled person would select, when looking for an alternative process.

- 5. In view of the state of the art disclosed in D1, D2 and D3 also the dependent <u>claims 2-22</u>. <u>24-29, 31-43 and 45-55</u> do not appear to contain any additional features which, in combination with the features of any claim to which they refer, would render the claimed subject-matter novel and/or inventive (Art.33(2)-(3) PCT). None of the specific embodiments appears to provide a solution to any problem, which solution involves an inventive step, as compared to the cited prior art
- 6. The subject-matter of claims 1-43 is considered to be industrially applicable and accordingly meets the requirements of Art.33(4) PCT.
